### Patient Case Notes

#### Pain of the mid finger and right shoulder

Had developed pain of the right shoulder radiating to the right upper limb. Also had isolated severe pain of the mid finger

### Clinical Radiology Summary

Finding Date	Diagnosis	Findings	Doctor
04/11/2020		BREAST ULTRASOUND REPORT Both breasts parenchyma shows normal fibro-glandular and fatty tissues. There is a 31mm x 15mm subcutaneous echogenic mass relative isoechoic to surrounding tissues. The mass is no vascular on doppler interrogations. No evidence of any duct ectasia. Nipple and retro areolar tissue appear normal. The pectoral muscles are normal. Axillary tail is visualised and appear normal. No sonographic evidence of regional/ axillary lymphadenopathy. Impression : Lipoma	Regina Namumba
04/11/2020		Normal right shoulder x ray	Augustino Mmbaga

### Clinical Laboratory Result

Parameter	Normal Range	Msr Unit	Results
Uric Acid	2.50-6.80	mg/dL	5.90
